

## Coding Guidelines

1. Do not use namespace. Use select parts of namespace e.g. using `std::cin`; etc
2. Braces after a function, loop or conditional should be on the same line and not left aligned

```
int main() {  
    std::cout << "Hello World" << std::endl;  
    return 0;  
}
```

3. Use lowerCamelCase or underscore\_separated\_words to name variables but not both
4. Name .cpp files with common letters only. Avoid spaces in project/file names
5. Ensure code has some degree of documentation via comments
